# CANADIAN URBAN VICTIMIZATION SURVEY

USER REPORT #2

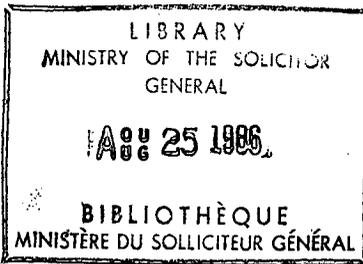

*AWARENESS AND USE OF CRIME COMPENSATION PROGRAMS*

MINISTRY OF THE  
SOLICITOR GENERAL

RESEARCH AND STATISTICS GROUP

Canada

HV  
8688  
C25  
1984u

## PREFACE

This is the second in a series of User Reports on the Canadian Urban Victimization Survey. The User Reports are designed to respond to specific information requests, and to meet the needs of specialized audiences.

In addition, a series of Bulletins on topics of general interest will be published and disseminated more broadly.

The User Reports and Bulletins, as opposed to a single comprehensive report, should assure that the Canadian Urban Victimization Survey results are easily accessible and useful to a wide variety of audiences.

Further reports from the Canadian Urban Victimization Survey will deal in more depth with the costs of crime; measurement of crime and victimization; elderly victims; victims of violence by intimates and violence by strangers; break and entry offences; motor vehicle thefts; vandalism; perceptions of crime and the criminal justice system; and social, environmental and seasonal factors which are related to risk of victimization in the seven Canadian cities.

## AWARENESS AND USE OF CRIME COMPENSATION PROGRAMS

### The Canadian Urban Victimization Survey

Until recently, little could be said with confidence about which Canadians were most likely to be victimized by crime or even how many were victimized. Official crime statistics such as the Uniform Crime Reports give virtually no information on the victims of crime nor on the incidence of crimes not reported to the police.

Recently, however, the Ministry of the Solicitor General with the assistance of Statistics Canada conducted a victimization survey in seven major urban centres: Greater Vancouver, Edmonton, Winnipeg, Toronto, Montreal, Halifax-Dartmouth, and St. John's. This random sample of 61,072 Canadians provides us with the most extensive Canadian information yet produced concerning the extent of reported and non-reported crime during 1981, the risk of criminal victimization, the impact of crime, public perceptions of crime and the criminal justice system, and victims' perceptions of their experiences. On the basis of the interviews conducted, statistical estimates were made for the general population 16 and over in the seven cities. These statistically derived estimates for the population are used throughout this report<sup>1</sup>.

As Table I indicates, there were a large number of victims of crime in the seven cities surveyed. For the year 1981, there were more than 700,000 personal victimizations (sexual assault, robbery, assault, and theft of personal property), and almost 900,000 household victimizations (break and enter, motor vehicle theft, household theft and vandalism). Fewer than 42% of these incidents had been reported to the police. Quite simply, a large number of Canadians had been victimized, many more than official crime statistics would indicate.

---

<sup>1</sup> Details of the methodology used are available from the Ministry of the Solicitor General in a report entitled "Measurement of Crime and Victimization", forthcoming.

Most of these incidents, it should be noted, did not involve those offences which evoke our greatest fears. There were relatively few sexual assaults or robberies, for example. Far more frequent were personal thefts (without contact) and assaults. Similarly, household theft was the most frequent of household offences followed by break and enter and vandalism with relatively few motor vehicle thefts. Appendix 1 provides offence definitions.

While in the public consciousness crime is generally equated with violence, in the experience of Canadians, crime is rarely violent. Canadians are far more likely to be victims of crimes against property than crimes against the person.

This is not to suggest that the experience of victimization is therefore typically a painless one with little lasting effect. A good deal of research, for example, has shown that the victims of break and enter in particular may experience a sense of invasion beyond the suffering caused by their actual material loss. This invasion of one's home often produces a heightened concern about and fear of crime more generally.

### Injuries due to victimization<sup>2</sup>

Of the approximately 1,600,000 victimization incidents estimated in the seven cities, fewer than 350,000 could be classified as involving personal contact with the offender<sup>3</sup>. Nevertheless, these resulted in 50,500 nights in hospital and 405,700 days lost due to some form of incapacitation. About 10% of those who were victims of assault, robbery or sexual assault had to seek some form of

---

<sup>2</sup> For a description of financial and other costs see "The Costs of Crime to Victims", forthcoming.

<sup>3</sup> There were 404,000 victims involved in these incidents (see Table 4)

medical or dental attention. While serious injury was relatively rare, again the costs of victimization fall more heavily on some than on others, on those who have only basic medical coverage and of course on those who are physically frail and vulnerable.

We know that the victims of some offences are more likely than others to be seriously injured. Victims of sexual assault, in particular, were more likely to be injured and when injured were more likely to require medical attention. We know too that the costs of such offences run far deeper than the physical or financial.

Unfortunately, researchers have only recently begun to collect information on the emotional damage caused by victimization. We do know that the fear produced by some forms of victimization can become crippling and can turn victims inward closing them off from social support when they most need it. [We are being made increasingly aware of the insidious and emotionally crippling effects of certain kinds of offences - sexual assaults, child abuse, wife battering and other domestic violence - not only on the victims but on the victims' families and not only in the short term but long after the offender has been dealt with by the criminal justice system. And the victims' emotional suffering may be made more acute by their experiences with the criminal justice system.]

Although the emotional impact of victimization was not a major focus of the Victimization Survey, about one quarter of the victims did say that victims of their type of crime should have emotional or psychological counselling available to them. This includes victims of property crimes and other offences generally considered less serious.

Crime Compensation as a Form of Victim Redress

At the time of the Victimization Survey in early 1982, Crime Compensation Programs had been in place in six of the seven provinces included in the Survey (British Columbia, Alberta, Manitoba, Ontario, Quebec, and Newfoundland) for some years. Nova Scotia program had been in operation for less than a year. These programs have been cost shared between the federal and provincial governments since 1973. Although they vary in their specific provisions and mechanisms, all were intended to offer a means of financial redress to injured victims of violent crime, and to "Good Samaritans" who suffered injury, material loss or damage while assisting in the prevention of a crime, or in the apprehension of a criminal. In all jurisdictions some assessment is made of the victim's contribution to or complicity in the incident before an award is determined.

Awareness of Crime Compensation Programs

Two sets of questions about Crime Compensation Programs were asked in the Survey. In the first set, all respondents (victims and non-victims) were asked if they had heard of the Crime Compensation Program (Screen Question 17). Those who answered "yes" to this question were then asked whether, in their province, victims of theft, break-ins, assaults and rapes were eligible or ineligible for compensation. The two relevant questions from the Screen Questionnaire are copied below.

17 Have you heard of the Crime Compensation Program?

- 1  No — go to 19
- 2  Yes

18 In this province are victims of the following types of crime eligible for compensation from the Crime Compensation Program? Victims of ...

	Yes	No	Don't Know
Theft	01 <input type="checkbox"/>	02 <input type="checkbox"/>	03 <input type="checkbox"/>
Break-in	04 <input type="checkbox"/>	05 <input type="checkbox"/>	06 <input type="checkbox"/>
Assault	07 <input type="checkbox"/>	08 <input type="checkbox"/>	09 <input type="checkbox"/>
Rape	10 <input type="checkbox"/>	11 <input type="checkbox"/>	12 <input type="checkbox"/>

Overall, only about one-quarter (24%) of all respondents had heard about Crime Compensation programs, the range being from only 8% who were aware of the programs in St. John's, to 29% who were aware of the programs in Vancouver (Table 2).

Respondents who said they were aware of the programs were not very clear about the scope or intent of the programs, as is indicated by the percentage distributions in Table 3. In all cities surveyed, injured victims of assault or rape could be eligible to apply for compensation, but only 73% of those who had heard of the programs stated definitely that assault victims were eligible for compensation. Vancouver and Toronto respondents were the most likely to know that assault victims were eligible (85% and 80% respectively) but in St. John's, only 30% thought these victims were eligible.

Even greater confusion prevailed about the eligibility of rape victims for compensation<sup>4</sup>. Only 50% thought rape victims were eligible, and even in Vancouver (where overall knowledge about the programs seems to be greatest) only 56% of respondents to this question knew that rape victims were eligible. Again, St. John's respondents were least well informed, with only 24% indicating that rape victims were eligible.

---

<sup>4</sup> Questions referring to rape were asked before recent changes in the Criminal Code.

On average, respondents were almost as likely to give an incorrect or a "don't know" answer as to give correct answers regarding the eligibility of theft or break and entry victims for crime compensation.

**Awareness of the "Treated" Victims**

There were 404,000 victims of incidents which involved personal contact between victim and offender (hence with the potential for violence and injury) in the seven cities. Just over half (54%) of the victims of these incidents of sexual assault, robbery or assault were actually attacked physically. Medical or dental treatment was sought by 34,000 victims of violent crime (Table 4). Treated victims were only marginally more likely than the general public or other victims to say they were aware of crime compensation programs (27% as compared to 24%).

Further Crime Compensation questions were asked only if a respondent had been the victim of a violent personal crime (sexual assault, assault or robbery) in which injuries had been suffered, and medical or dental treatment of some kind had been received. These "treated" victims were then asked if they had inquired about eligibility, if they had been told they might be eligible for compensation, and finally if they had made any claim for compensation through the established programs, or from an insurance company.

A copy of the relevant Incident Report questions appears below:

**25 Did you receive any medical or dental attention after the attack?**

- 1  No ——— Go to 34
- 2  Yes

26. Did you receive any treatment at a hospital?

- 1  No \_\_\_\_\_ Go to 28
- 2  Yes

27 Did you stay overnight in the hospital or did you receive emergency treatment only?

- 1  Emergency only
- 2  Stayed overnight or longer

Inquiries and Information

Table 5 shows that only 8% of those who received medical or dental treatment as the result of criminal injuries made any inquiries about eligibility for compensation, and that those who did inquire were most likely to ask police or "others", most probably friends and relatives. Certainly if victims do not even know about the existence of such programs they will not know to ask, or what to ask.

Treated victims were also asked if anyone had told them they might be eligible to receive compensation from a Crime Compensation Program (Incident Question 29). Thirteen percent said they had been informed about the Program. Of those informed, a minority got their information from police (21%), lawyers (15%), or social service agencies (10%), and the majority from "others" (55%). Although "crown prosecutors" appeared as an alternative response category in the interview schedule, they apparently were not asked, nor did they volunteer information about eligibility to any treated victims (Table 6).

These figures confirm that many treated victims remain uninformed about the possibility that they could claim some kind of compensation regarding injuries received. Due to low numbers, we are unable to determine whether the informed victims were any different from the uninformed victims in terms of seriousness of injury, age, type of incident, or victim culpability.

Tables 6 and 7 show that although 13% of treated victims were informed that they might qualify for Crime Compensation Program funds, only 3.8% actually made applications to these programs. A further 2.7% made other claims, including insurance claims.

Clearly, fewer than one-third of those who are given information proceed to file a compensation claim. This high attrition rate among potential applicants is likely due to a variety of factors about which we can only speculate:

- 1) some may perceive that the costs in terms of time and effort required to proceed may outweigh the potential benefits;

- 2) a process of self-selection may be occurring in which victims screen themselves out because of their perceived complicity in the victimization or because of a more general reluctance to get involved with the criminal justice system, or because of a reluctance to rehearse or "relive" the victimization experience; and
- 3) some may simply lack sufficient information about the process to know how to complete an application.

The survey data reveal that victims are most likely to report to police incidents which resulted in significant financial loss - rather than those which resulted in pain, injury and fear. For many, reporting crimes is less an act of justice (or even revenge) than a far more utilitarian act - seeking redress, recompense or recovery. Perhaps if more were aware of the availability of criminal injuries compensation, more would report violent offences.

### Conclusions

Crime Compensation Programs are neither well known nor well understood, although respondents in a few cities do seem to be more informed than others. What is of more concern, however, is the fact that even those victims who might qualify for compensation remain uninformed about the existence of these programs and the types of victims they are intended to serve.

Crime Compensation Programs were established because of a widespread recognition that victims of violent crime were often in need of financial, as well as other assistance to help them cope with the aftermath of their victimization. Such programs are a fundamental part of the larger victims movement to which all levels

of government have been committed in the past few years. The potential of such programs to help victims regain their sense of personal dignity and their prior status, and through this to gain a more positive perception of the criminal justice system, will only be realized as Canadians - victims and non-victims alike - learn about the existence and objectives of the Crime Compensation Programs.

In a time of fiscal restraint there is an understandable caution about the cost implications of such programs, and some might fear that as more Canadians become aware of the programs, the expenditures will far exceed budget allocations. Our data are important then, if only because they show that even with information, only a small minority of victims who are probably eligible, proceed with applications.

More importantly however, these data make a strong case for the need to disseminate systematically information which would enable victims to take advantage of the programs which have been devised to meet their specific needs. Screening of applicants and rationing of resources will obviously be necessary, and should reflect careful deliberation and perhaps debate about eligibility requirements, maximum awards and the like. Policy recommendations about these matters are soon to be available from the Federal/Provincial Task Force. But "screening" should not be the result of the uneven distribution among Canadians of information and awareness.

<sup>1</sup> Caution should be exercised in interpreting these distributions since these estimates are based on a raw count of only 23 respondents who indicated they filed any claim, 13 from Crime Compensation Programs.

APPENDIX 1

DEFINITIONS AND LIMITATIONS

The eight categories of crimes included in this survey are: sexual assault, robbery, assault, break and entry, motor vehicle theft, theft of household property, theft of personal property and vandalism. These offences are ranked in descending order of seriousness.

1. Sexual assault includes rape, attempted rape, molesting or attempted molestation, and is considered the most serious crime.
2. Robbery occurs if something is taken and the offender has a weapon or there is a threat or an attack. The presence of a weapon is assumed to imply a threat. Attempted robberies are also included in this offence category.
3. Assault involves the presence of a weapon or an attack or threat. Assault incidents may range from face-to-face verbal threats to an attack with extensive injuries.
4. Break and enter occurs if a dwelling is entered by someone who has no right to be there. "No right to be there" differentiates, for example, between a workman who is in a dwelling with the permission of the owner and steals something, and someone illegally entering the dwelling to take property. The latter would be classified as a break and enter as are attempts to enter a dwelling if there is some evidence of force or knowledge of how the person tried to get in.
5. Motor vehicle theft involves the theft or attempted theft of a car, truck, van, motorcycle or other motor vehicle.
6. Theft or attempted theft of household property.
7. Theft or attempted theft of money or other personal property (not household property).
8. Vandalism occurs if property is damaged but not taken.

Incidents which involved the commission of several different criminal acts appear in the tables only once, according to the most serious component of the event. Thus for example, if sexual assault, theft of money and vandalism all occurred at the same time, the incident would be classified in these tables as sexual assault. An incident would be classified as vandalism (least serious on the hierarchy) only if no other crime which is higher on the seriousness scale occurred at the same time.
